DETAILED ACTION

1. Applicant's election with traverse of Group II in Paper No. 5 is acknowledged. The Examiner has reissued the restriction requirement because it is also held that the process claims of Group II require a species election. The Examiner will respond to the Applicant's arguments regarding the restriction requirement in the next Office Action.

Election/Restrictions

2. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 38 - 43, drawn to a flat strip lamella.

Group II, claim(s) 22 - 37 and 44, drawn to a process for producing a flat strip in a continuous process.

3. The special technical feature of group I is a flat strip comprising a woven fabric made of high strength yarns embedded in a thermoplastic resin and a releasable film layer as recited in claim 38. The forgoing special technical feature is shown in prior art of Ozaki et al., US 6,027,794, (column 3, lines 25 - 55; column 5, lines 39 - 42; column 9, lines 15 - 25; column 11, lines 25 - 35). Therefore, there is no contribution made over the prior art. Hence, there is no unity of invention and lack of unity is held by the Examiner.

Art Unit: 1771

4. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species I (claims 22 – 32 and 44): a process for production of a flat strip in a continuous process by *melting a thermoplastic film* to impregnate a fiber web

Species II (claims 33 – 37): a process for production of a flat strip in a continuous process by *impregnating a fiber web by passing through a suspension* of finely divided thermoplastic particles

5. Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

6. Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

7. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Species I has the special technical feature of melting

Art Unit: 1771

a thermoplastic film to impregnate the fiber web while species II has the special technical feature of impregnating the web by passing through a suspension. The two species lack the same technical feature, therefore, lack of unity is held.

8. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jennifer A Boyd whose telephone number is 703-305-7082. The examiner can normally be reached on Monday thru Friday (8:30am - 6:00pm).
